

**NATIONAL CANCER INSTITUTE****Surveillance, Epidemiology, and End Results Program**

## Download U.S. Population Data – 1969–2019

**Released February 2021**

(<https://seer.cancer.gov>)

Files containing U.S. population data are provided for analysis using your own statistical software or using SEER\*Stat

(<https://seer.cancer.gov/seerstat/>) (you must use the SEER\*Prep (<https://seer.cancer.gov/seerprep/>) software to create a database for use in SEER\*Stat).

## Notes

- The U.S. Census Bureau annually releases unbridged population estimates for five-year age groups and race at the county level (<https://seer.cancer.govhttps://www.census.gov/programs-surveys/popest.html>). The Census Bureau does not release bridged race estimates by single year of age at the county level due to concerns about the reliability of these estimates. However, these estimates are provided to the National Cancer Institute to meet programmatic needs such as the creation of age groupings that differ from the standard groupings used by the Census Bureau. Users of the single-year-of-age county-level bridged race population estimates should carefully consider the limited reliability of these estimates.
- Annual data releases include both an additional year of data and updates to previous estimates for all years going back to the last decennial census (see Population Estimates Used in NCI's SEER\*Stat Software (<https://seer.cancer.gov/popdata/methods.html>)).

## Available Files

Populations are available for the following time periods and "races":

- 1969-2019 County-level: White, Black, Other;
- 1990-2019 County-level: Expanded Races (White, Black, American Indian/Alaska Native, Asian/Pacific Islander) by Origin (Hispanic, Non-Hispanic);

County-level population files with 19 age groups (<1, 1-4, ..., 80-84, 85+) and with 86 single-year age groups (<1, 1, 2, ..., 84, 85+) are provided below.

For the All States Combined and four states (Alabama, Louisiana, Mississippi, and Texas), two sets of population estimates are available for 2005: the standard set based on July 1 populations and a set that has been adjusted for the population shifts due to hurricanes Katrina (August 29) and Rita (September 24). For more information, see Adjusted Populations for the Counties/Parishes Affected by Hurricanes Katrina and Rita ([https://seer.cancer.gov/popdata/hurricane\\_adj.html](https://seer.cancer.gov/popdata/hurricane_adj.html)).

## Data Files for Download

The data are stored in text files and provided here as Windows self-extracting ZIP files (executables) and gzip files. File format information is provided in the Population Data Dictionary (<https://seer.cancer.govpopdic.html>). The files are grouped by the following categories:

- County-level Population Files - 19 Age Groups
- [County-level Population Files -Single-year Age Groups](#)

**County-Level Population Files - 19 Age Groups**
